DID YOU KNOW?

Where does the name "Bloemfontein" come from?

Legend has it the city was named after an early settler's favourite ox named Bloem, who was taken by a lion near a local spring. However, historians most widely accept that it translates directly from Dutch as "Fountain of Flowers", referring to the lush natural springs and wildflowers that once carpeted the valley long before the city was established in 1846!

TROTS PELLISSIER

WOONBUURTASSOSIASIE DOEN DIE WERK IN PELLISSIER

Het u al ooit gedink hoe Pellissier teen die tyd sou gelyk het as Trots Pellissier nie vragte en vragte vol rommel verwyder het nie? Week na week ry ons bakkievrag na bakkievrag weg.

Hoeveel meer sou die slaggate gewees het as Trots Pellissier nie gate opgevul het nie.

In 2025 het ons R70 000 spandeer om slaggate toe te maak. Inwoners wat elke maand hul ledegeld getrou bydra, maak die herstel van Pellissier se paaie moontlik. Baie meer fondse word benodig om al die gate te vul en nog meer om die strate ‘reg’ te maak. Redelik onlangs is herstelwerk aan slaggate gedoen, die koste was R9000 vir een maand.

Hoe sou die grasvelde en sypaadjies gelyk het as Trots Pellissier dit nie gesny het en rommel opgetel het nie. Neem jou kinders na die Kolperdparkie, Trots Pellissier hou dit netjies en werk gereeld daar. Die toerusting is geverf en netjies gemaak en ons hou die gras kort. Hou daardie spasie dop vir groter dinge om te kom.

Trots Pellissier is ‘n geregistreerde nie-winsgewende woonbuurtassosiasie net vir Pellissier en verbeter die buurt namens u.

‘n Bedrag van R200pm per huis of R150pm vir meenthuise/pensionarisse maak Trots Pellissier se werk moontlik. Die fondse wat deur middel van ledegeld ingekry word, word gespandeer in Pellissier en is tot voordeel van u die inwoner. U ledegeld bly dus in Pellissier en verhoog die waarde van u eiendom, want niemand wil in ‘n vuilplek bly nie.

Die afgelope somer het Trots Pellissier 40 vragte gesnoeide boomtakke verwyder teen ‘n koste van R7200. In die toekoms sal Trots Pellissier graag veiligheidskameras wil opsit terwille van buurtveiligheid. Dit is egter baie baie duur en ons sal baie meer as die huidige 250 as bydraende lede moet hê wat elke maand bydra om dit ‘n moontlikheid te maak.

As in u Pellissier inry en u sien dit is netjies en skoon…dit is Trots Pellissier Woonbuurt Assosiasie se hande werk, week na week.

Wat doen Trots Pellissier nog?

Ons help saam met ons Raadslid Paul Kotze om waterlekke, riool- en kragprobleme op te los.
Soms soek ons na inwoners se verlore diere. Ons gee raad, help met telefoonnommers. Ons gaan kyk waar daar probleme is en rapporteer dit soos en waar nodig. Waterlekke, probleme met meters, gebarste pype. Ons gaan kyk daar waar die probleem is en neem die nodige aksie.
Verdagte optredes word gerapporteer en aangespreek via sekuriteitsmaatskappye.

Sluit aan, dit is die toekoms.

>>>Trots Pellissier kry geen finansiële bystand van die Munisipaliteit nie. Wat Trots Pellissier doen is omdat ons graag in 'n mooi en ordentlike buurt wil bly.

Waar wil jy bly? In 'n mooi en netjiese buurt?

Sluit dan aan dat Trots Pellissier Woonbuurt Assosiasie meer kan doen. Ons doen die werk namens jou, vir jou vir 'n beter toekoms vir jou en jou gesin.

BLOEMFONTEIN

SUPPORTING OUR BLOEMFONTEIN SPCA

TOGETHER WE MAKE A DIFFERENCE

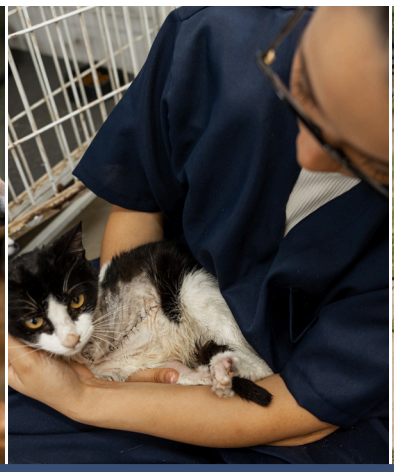

The Bloemfontein SPCA would like to extend a heartfelt thank you to the Pellissier community and surrounding areas for your continued support. Your financial contributions, food donations, blankets and other much needed supplies make a real difference in the lives of the animals in our care.
Every bag of food, every donation and every act of kindness helps us provide animals with the care, food, veterinary attention and safe shelter they deserve. We truly appreciate every person, family and business who supports the SPCA.

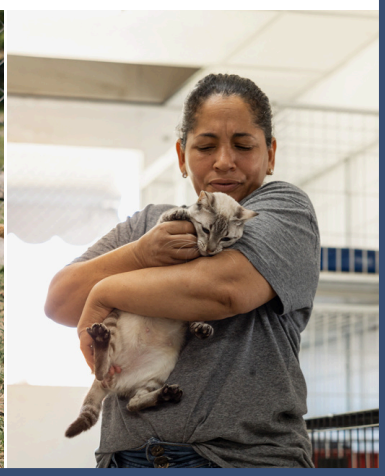

Parvo Season, Please Protect Your Dogs

We are currently entering parvo season, and we would like to remind the community to take precautions. Parvovirus is a highly contagious and potentially deadly disease, particularly in puppies and unvaccinated dogs.

Please make sure your dogs' vaccinations are up to date and avoid allowing unvaccinated puppies to come into contact with unknown dogs or contaminated areas. If your dog develops severe diarrhoea, vomiting, weakness or stops eating, please contact a veterinarian as soon as possible.

BLOEMFONTEIN

An Important Time for the Bloemfontein SPCA

The SPCA is also entering an exciting but financially challenging period. We are starting with upgrades to our kennels and the construction of an improved wash bay, which will greatly assist with hygiene, cleaning and the overall welfare of the animals in our care.

These improvements are important for creating a cleaner, safer and more suitable environment for the many animals that come through our doors. However, the projects come with significant costs, and we are currently in urgent need of financial support.

We appeal to the Pellissier community and surrounding areas to please continue standing with us. Whether it is R50, R100, R500, a bag of food, building materials or a larger contribution, every donation helps us move forward.

Together, we can improve the SPCA, improve animal welfare and give the animals in our community a better chance at a safe and loving life.

Bloemfontein SPCA, Caring for Animals, Serving Our Community.

Raw Power, Real Science:

4 SURPRISING FACTS ABOUT ASPHALT

- **100% Recycled:** Asphalt is the world's most recycled material—nearly 99% of old roads are reclaimed and reused.
- **Ancient Tech:** Babylonians used natural bitumen in 620 BC to pave roads and seal aqueducts.
- **Built to Flex:** Unlike rigid concrete, asphalt bends under heavy truck axles without cracking.
- **Safer Drives:** Porous asphalt drains rainwater through the top surface to stop hydroplaning and cut road noise.

SPRING GARDEN PREP: EARLY OCTOBER TIPS

Spring is in full swing across Bloemfontein! Here is how to keep your Pellissier garden thriving as the weather warms up:

- **Optimal Watering:** Water in the early morning between 06:00 and 08:00. This gives plants the hydration they need for the day ahead while avoiding rapid evaporation as the midday sun gets stronger.
- **Feed Your Lawn:** Apply a balanced spring fertiliser to give your grass a boost after winter dormancy, and keep mower blades at a medium height to encourage deep root growth.
- **Spring Planting:** October is ideal for planting summer-flowering annuals (like petunias and marigolds) and starting your summer veggie patch with tomatoes, peppers, and spinach.

DEHYDRATION:

KNOW THE SIGNS, KNOW THE RESPONSE

QuintaMed

Dehydration is one of those conditions we see year-round, but it always creeps up more during our warm Free State months and during seasonal gastroenteritis times. Managing dehydration is more than "just drink more water" – but knowing what causes it, what to watch for, and how to respond can make a real difference for your family.

What causes dehydration?

In small children, dehydration is most often triggered by vomiting, diarrhoea and fever or severe heat. In older children and adults, the causes broaden slightly: vomiting, diarrhoea, heat and heatstroke still feature, but so do intense physical activity and disturbed eating patterns.

Warning signs to look out for.
In small children, watch for sunken eyes, unusual sleepiness or lethargy, dark urine, reduced skin elasticity, a skin pinch that takes longer than usual to bounce back, and increased thirst.
In older children and adults, the signs shift slightly: strong thirst, concentrated (dark, strong-smelling) urine, reduced sweating, and lethargy.

...continued

How to manage dehydration

- Preventing dehydration: Keep up electrolyte fluids whenever physical activity increases, especially in warm weather, and increase fluid intake generally when it's hot. Treat underlying causes – like a stomach bug – promptly.
- Rehydration: Using low-osmolality rehydration fluids works best. These are available as sachets from your pharmacy, or you can use a diluted sports drink or diluted clear fruit juice. Give small sips – about 5 to 20 ml – every 10 to 30 minutes, rather than large amounts at once, to avoid triggering more vomiting.
- Seek medical help: If someone cannot keep fluids down, or shows extreme lethargy, irritability, or sunken eyes, it's time to see a doctor without delay. For children in particular, don't wait: see a doctor as soon as possible if a child refuses to eat or drink, or is vomiting everything.

Dehydration is common, but it is also very manageable when caught early. Knowing the early signs and having the right fluids on hand goes a long way toward keeping your family safe through our hot months. When in doubt, don't hesitate to reach out to your doctor; early action is always the safer choice.

QuintaMed

Measles and the measles vaccine

Highly contagious before symptoms show. Measles spreads for 4 days before the rash appears and 4 days after — often while it still looks like a common cold.
Disease timeline: A 7–21 day incubation period is followed by 3–7 days of fever, cough, runny nose and conjunctivitis, then a facial-to-body rash lasting 4–8 days.
Serious complication risk: Pneumonitis occurs in roughly 1 in 16 cases, and encephalitis in about 1 in 1 000 (up to two weeks after the rash appears) — with possible long-term vision, hearing or learning problems.
Local impact: In 2026, South Africa recorded around 4 200 cases, with 900 in the Free State and >500 in Bloemfontein — mostly among children aged 5–14.
Life-threatening in the worst cases. Globally, 1 in 100 children with measles die, and infection can weaken immune memory against other diseases long afterwards.
Vaccination works and is safe. Two doses give around 96% protection. Serious side effects such as anaphylaxis (1 in 1 million doses) or febrile convulsions (1 in 3 000 doses) are rare, with most reactions being mild.

RETHINKING *Pest Control*

A MORE ECO-FRIENDLY APPROACH FOR PELLISSIER

Living alongside wildlife can sometimes be challenging. Birds nesting where they are not wanted, or mice and rats finding their way into homes, can quickly become a nuisance. But does controlling pests have to mean poison, glue traps or pellet guns?

Fortunately, there are more environmentally friendly alternatives.

AVIAN PEST SOLUTIONS

One organisation worth highlighting is Avian Pest Solutions, a professional problem-bird and small-animal control business operating in the Free State, Gauteng and the Cape.

Owned by Tim McPerson, the business focuses on lawful, eco-friendly pest control and uses natural anti-cruelty methods where possible.

One of these methods involves trained Harris hawks to help manage pest-bird populations without relying on poison or lethal methods.

Tim is also passionate about conservation and wildlife.

OWL RESCUE CENTRE

Another inspiring example is an Owl Rescue Centre in Gauteng, founded and managed by Brendan and his wife, Danelle Murray.

Rather than seeing mice and rats only as pests, the centre encourages people to catch them using appropriate live traps. The animals can then be collected and used as a food source for rescued owls.

This creates an interesting cycle: instead of poisoning rodents, they can potentially become part of supporting wildlife rehabilitation.

Both Tim and Brendan demonstrate that pest management and wildlife conservation do not necessarily have to be opposing ideas. With some creativity, education and cooperation, there are ways to address pest problems while reducing the impact on other animals and the environment.

Perhaps it is time for us in Pellissier to ask ourselves:
Could we adopt a more eco-friendly approach to pest control in our neighbourhood? ♡

Would residents support exploring alternatives such as professional wildlife management, natural bird control and safe trapping methods instead of poison, glue traps and pellet guns?

Sometimes protecting our neighbourhood also means finding ways to protect the wildlife that shares it with us.

PROTECT OUR WILDLIFE | PROTECT OUR HOMES | WORK TOGETHER AS A COMMUNITY | LEAVE A BETTER FUTURE
